

## Merchant sustain cash awareness

Relief the challenge of staying constantly in touch with your RCC system, even while you are away of your computer. CashXCell versatile mobile app will sustain real-time awareness for the Merchant, as well as every stakeholder in the RCC scheme.

## Single view CSS fleet status landscape

Single view status of every Cash Smart Safe device in your fleet. Quickly identify occasional issues marked by time-stamped colored icons with short status descriptions.

## Automated health status notifications

CashXCell will timely notify you for any operational issues in your Smart Safes fleet. Monitoring frequency, notification profile and means of connectivity are fully customized.

## Dashboard view

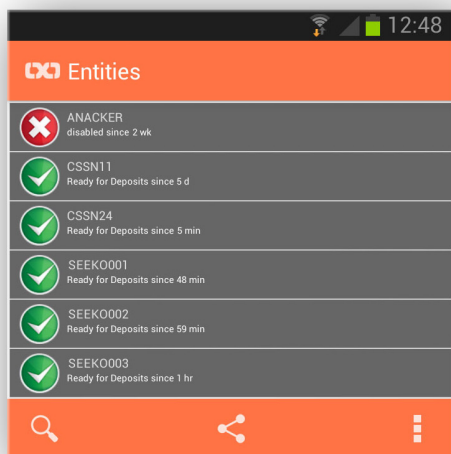

Select any Smart Safe by a simple touch, to bring its Dashboard view with current cash inventory, shift operator, last few days runtime series of daily cash turnover, and much more.

## Shifts perpetual history details

Drill down to operational shifts by date and/or by supervisor, with information on associated cash deposits. Traverse back perpetually in time by scrolling down.

## Multiple access roles via AUAC

CashXCell is accessible by every stakeholder in the RCC scheme provided that has granted the necessary credentials by the CMN System administrator, while information provided are subject to the Adaptive User Access Control (AUAC).

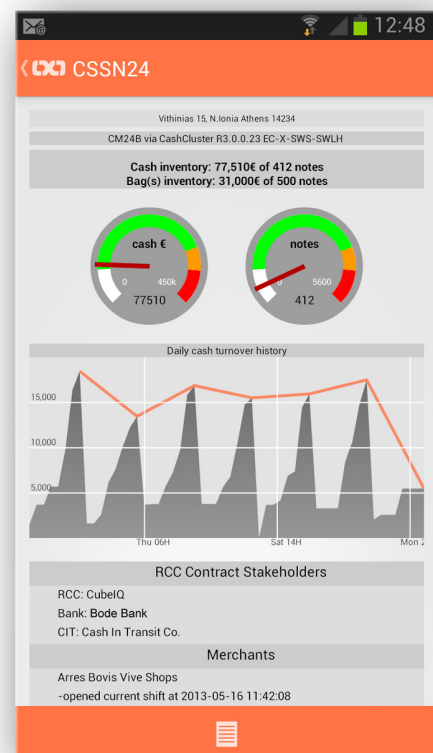

## Single view fleet status

CashXCell mobile app sustains Merchant real-time awareness by staying constantly in touch, while away of his computer. CashXCell mobile application maintains direct contact with the CMN System, anytime, anywhere.

Entities list provides a single view status of each Cash Smart Safe device in your fleet. Quickly identifying occasional issues marked by time-stamped colored icons with short status description. In large installed base of Smart Safes, there are provisions to show only devices in error, and/or search by smart filters.

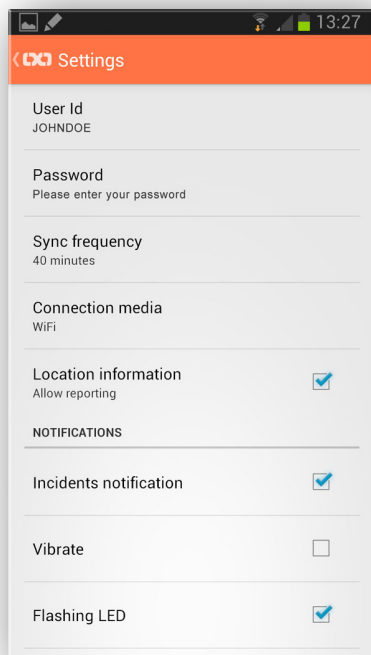

## Entity Dashboard to monitor cash

By touching any row in the Entities list, CashXCell will present an informative Dashboard with operational details on the respective Smart Safe device, such as location, participating stakeholders, current cash inventory, shift operator and runtime series of daily cash turnover.

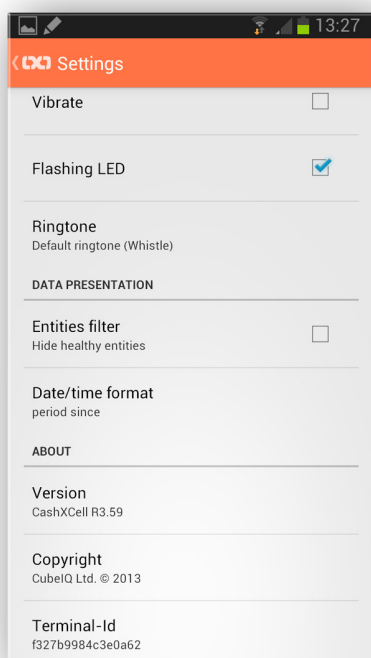

## Health monitoring notifications

CashXCell allows you to provide your preferred settings:

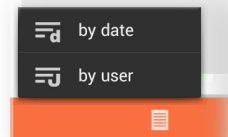

Settings, among other, affect the health monitoring of your Cash Smart Safes fleet. You may define the monitoring frequency, whether it will happen only while WiFi is available or even by using cellular telephony comms, and profile the means of notification by defining the ringtone, vibration and LED alarm.

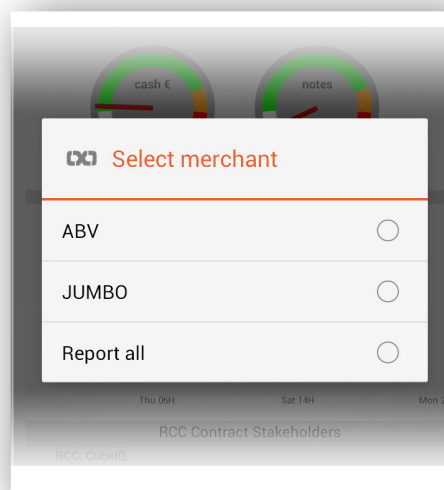

## Cashiers Shifts history

From the Entity Dashboard, you may drill further down to operational shift details. CashXCell offer the choice to present them by date and/or by supervisor.

In case that the target entity hosts more than one merchants and current CashXCell user is authorized for full visibility, the system will offer the possibility to select one or all the merchants.

The relevant list shows open and closing time, with information on associated cash deposits. You may traverse back perpetually in time by scrolling down.
